

IFEOLUWA SANNNI

Lead Blockchain Developer · Senior Frontend Engineer · Remote

pheobeayo@gmail.com · github.com/pheobeayo · linkedin.com/in/ifeoluwa-sanni

PROFILE

Senior Frontend Engineer with 4+ years building production-grade React/Next.js applications across DeFi protocols, industrial IoT dashboards, and developer tooling. Deep expertise in TypeScript, component architecture, and real-time UI patterns, including streaming data, WebSocket-backed views, and stateful application surfaces. At Confidios, I own the full Access Policy Engine frontend: a multi-surface React/TypeScript dashboard serving enterprise clients, built end-to-end with high autonomy. Across 20+ open-source contributions, I have shipped across Ethereum, Stellar, and StarkNet ecosystems, pairing frontend skills with protocol-level understanding. Thrive on small, high-ownership teams where quality and velocity both matter.

TECHNICAL SKILLS

- Frontend: React (App Router, Server Components, Server Actions), Next.js 14/15, TypeScript, Tailwind CSS, Framer Motion, shadcn/ui, Radix UI
- State & Data: React Query v5, Zustand, SWR, Axios, REST, gRPC-web / Connect Query, protobuf / auto-generated type-safe clients, WebSocket
- Real-time & Streaming: WebSocket-backed live data views, streaming content rendering, Server-Sent Events, real-time session analytics
- Design Systems: component library authorship, design token systems, shared primitives across multi-surface products
- Backend & Infrastructure: Node.js, Express, TypeScript microservices, AWS (DynamoDB, S3, ECS, Secrets Manager), Python, Go (reading/navigating)
- Testing & Tooling: Vitest, Jest, Playwright, pnpm, Vite, ESLint, CI/CD (GitHub Actions)
- Blockchain / Web3: Solidity, Cairo (StarkNet), Rust (Soroban/Stellar), zero-knowledge proofs applied for security and verifiability, not as a distraction from frontend craft

EXPERIENCE

Lead Blockchain Developer · Confidios (USA — Remote)

August 2025 – Present

- Own the Access Policy Engine (APE) — a React/TypeScript dashboard with a multi-step policy creation wizard, evidence packet management, collapsible sidebar, and Arweave-anchored audit trail; sole frontend owner, shipped from design spec to production with no dedicated QA.
- Built real-time document pipeline views, surfacing live ingestion state for enterprise clients' stateful, streaming-ready UI patterns directly applicable to voice agent session analytics.
- Implemented POST endpoints integrating a third-party forensic service (ALIAS); authored full Confluence infrastructure documentation used by external integrators.
- Worked across a Node.js/TypeScript/Express microservice stack with AWS (DynamoDB, S3, ECS, Secrets Manager); routinely made backend enhancements to unblock frontend delivery exactly the Go/gRPC self-sufficiency LiveKit values.
- Stack: React, TypeScript, Next.js, Tailwind CSS, AWS SDK v3, DynamoDB, Express, TSOA, Cairo smart contracts.

Smart Contract Code Reviewer · GoodDollar

March 2026 – Present

- Review Solidity smart contract PRs for correctness, security, and edge-case handling on a live UBI protocol; provide structured, actionable feedback to open-source contributors, reinforcing the holistic product thinking LiveKit needs in senior engineers.

Senior Frontend Engineer (Open-Source) · OnlyDust / Drips *Sep 2024 – Present*

- FactorySenseAI (industrial monitoring dashboard): built a full React Query v5 / Axios integration layer against a FastAPI backend with real-time sensor feeds, live numeric telemetry, multi-chart dashboards, alerts, the closest publicly visible analogue to LiveKit's Session Analytics surface.
- Enkrypt wallet Helios light client (PR #792): integrated trust-minimised Ethereum verification in TypeScript; involved promise-based concurrency, blockTag parameterisation, and multi-reviewer PR cycles production-quality code shipped to a browser extension used by thousands.
- walletbeat/walletbeat RPC proxy (bounty): built a lying RPC proxy in TypeScript (Node.js built-ins only), intercepting eth_call to manipulate ERC-20 balances, adversarial test infrastructure demonstrating comfort with low-level network protocol work alongside React.
- GoodDollar PR #625 code review: performed technical review of a complex multi-component PR on a live UBI protocol, providing structured feedback on state management, edge case handling, and component architecture.
- Contributed to 20+ repositories: Stellar, StarkNet, Soroban, Hyperledger Besu (EIP-7702), ChainSafe Lodestar production PRs merged across diverse TypeScript/Rust/Solidity codebases.

Web3 Frontend Developer · Delight Digital Concepts International *Aug 2022 – Sep 2024*

- Shipped 4 full-stack DApps end-to-end: React/Next.js frontend, Solidity smart contracts, IPFS storage integration, wallet connection libraries — sole frontend engineer on each project.
- Owned the full delivery loop in a small, fast-moving team: requirements → architecture → implementation → deployment → user feedback iteration, with no dedicated QA or design support.

Mathematics & Science Teacher · Various Schools, Nigeria *2009 – 2022*

- Taught secondary-level mathematics, physics, and biology; mentored students through national exams. Framing complex technical concepts clearly for non-technical audiences is a deeply practised skill directly applicable to developer-facing tooling and documentation.

SELECTED PROJECTS

FactorySenseAI Dashboard — Industrial IoT Monitoring Platform *Next.js · React Query v5 · Axios · TypeScript · Tailwind CSS*

- Built a full API integration layer with real-time sensor feeds, multi-chart live data views, and alert state management against a FastAPI backend with no design support.

Adwumapa — Talent Hiring DApp · 1st Place EthAccra Hackathon *Next.js · TypeScript · Solidity · GraphQL · Tailwind CSS*

- End-to-end: escrow smart contracts, GraphQL data layer, full Next.js frontend beat international teams at EthAccra hackathon. Demonstrates ability to own complex, multi-surface product from zero to shipped under pressure.

FAR HORIZON Minerals Website — Next.js 15 · Tailwind CSS v4 · Framer Motion *Next.js · Framer Motion · Tailwind*

- Responsive marketing site with animated Hero, green brand palette derived from logo, and Framer Motion transitions, delivered to client specification with zero design system provided.

StoreMan — Next.js Store Management *Next.js · SQLite · TypeScript*

- Full-stack inventory management application with SQLite backend, built and shipped solo, demonstrates full ownership capability.

OPEN-SOURCE HIGHLIGHTS

- walletbeat/walletbeat — issue #519 (enforce 40-char commit hashes in wallet ref URLs): Python scripting and test fixes across branches; issue #505 (lying RPC proxy): TypeScript adversarial test harness.
- Hyperledger Besu PR #9345 — EIP-7702 eth_estimateGas fix for account abstraction (Java/EVM semantics).
- ChainSafe Lodestar PR #8579 — delayed voluntary exit broadcasting (TypeScript, Ethereum consensus layer).
- nftopia-stellar — full StarkNet→Stellar wallet migration across 25+ files: Freightier/Albedo providers, Zustand store, test files.

- Stellar GreenPay — SEP-0007 QR donation page; Bimex — Testnet→Mainnet migration with VITE_NETWORK env pattern; stellar-intel — SEP-1 TOML resolver with retry logic and typed result union.
- Soroban Quest issue #70 — real-time code validation with Monaco editor markers.

EDUCATION & TRAINING

B.Sc. Botany · Obafemi Awolowo University · 2002–2008

ZK Proof & Privacy — Dev3Pack · Oct 2025

Women in Ethereum Protocol Cohort IV · Oct 2025

Solidity — Web3Bridge · Sep 2025

Blockchain Full Course — Shefi · Jan 2025

Web3 Frontend Development — Ayaversity · 2022–2023 · Most Creative Web3 Frontend Developer Award

HTML, CSS & JavaScript — Johns Hopkins University (Coursera) · Jul 2022
